Cyclistic, a bike-share company in Chicago. Company's future success depends on maximizing the number of annual memberships.must be backed up with compelling data insights and professional data.

- Cyclistic is a bike-share program that features 5,824 bicycles and 692 docking stations.
- Cyclistic users are more likely to ride for leisure, but about 30% use them to commute to work each day.
- It has 3 flexible pricing plans- single-ride passes, full-day passes, and annual memberships.
- Single-ride or full-day pass customers are casual riders while those who purchase annual memberships are Cyclistic members.

Scenario

As a Junior data analyst, marketing analyst team at Cyclistic believes the company's future success depends on maximizing the number of annual memberships, as they are much more profitable than casual riders. Instead of targeting all-new customers, focus of the marketing strategy is on converting casual riders to annual members.

Ask

Three questions will guide the future marketing program:

- How do annual members and casual riders use Cyclistic bikes differently?
- Why would casual riders buy Cyclistic annual memberships?
- How can Cyclistic use digital media to influence casual riders to become members?

Business task (Goal)

"Analyzing the difference in usage patterns of casual riders and annual members with the aim to convert casual riders into annual members"

Data

We will use Cyclistic's historical trip data to analyze and identify trends. The datasets are appropriate and will enable you to answer the business questions.

privacy

This is public data that can use to explore how different customer types are using Cyclistic bikes. But note that data-privacy issues prohibit you from using riders' personally identifiable information. This means that you won't be able to connect pass purchases to credit card numbers to determine if casual riders live in the Cyclistic service area or if they have purchased multiple single passes.

Data Location

data was loaded from https://divvy-tripdata.s3.amazonaws.com/index.html (https://divvy-tripdata.sa.amazonaws.com/index.html (https://divvy-tripdata.sa.amazonaws.com/index.html (https://divvy-tripdata.sa.amazonaws.com/index.html (https://divvy-tripdata.sa.amazonaws.com/index.html (https://divvy-tripdata.sa.amazonaws.com/index.html (<a href="https://divvy-tripdata.sa.a

Data Organization

Data includes previous 12 month historical trip data from April 2020 to March 2021 with one .csv file for each month Each .csv file is organized in rows and columns structure with 13 Columns and variable rows

Credibility of the data/ Data Bias

The data is credible and free of bias. It comes from a reliable source, it is original trip data, comprehensive and current (last 12 months data).

Licensing, Privacy, Security, and Accessibility

- The data has been made available by Motivate International Inc. under this license.
- The data does not contain any private information of the riders, thereby maintaining their privacy.
- The data stands secure in an AWS web portal.
- The data is open-source and accessible to all.

Tools for the project

Since the combined dataset is very large with 3.8 million rows, Python Pandas has been chosen as the tool for data manipulation, cleaning, aggregation, analysis and visualization.

Tableau has been chosen as the tool for Interactive Dashboard creation.

Preparing phase

1. Importing required pacakages.

```
In [1]: import pandas as pd  #pandas dataframe
import geopy.distance #distance of coordinates
import numpy as np  #calculation numeriacal
import glob  #for specific pattern recognition
import matplotlib.pyplot as plt  #for plotting
```

Collecting all files

Here we are working with data from a cyclistic 12 months dataset. all are in same type (.csv) files.

```
all_files=glob.glob(r'C:\Users\mahad\Downloads\capstone_project\project_1\*.csv
In [2]:
In [3]: |all_files
Out[3]: ['C:\\Users\\mahad\\Downloads\\capstone_project\\project_1\\202004-divvy-tripda
        ta.csv',
          'C:\\Users\\mahad\\Downloads\\capstone project\\project 1\\202005-divvy-tripda
        ta.csv',
          'C:\\Users\\mahad\\Downloads\\capstone_project\\project_1\\202006-divvy-tripda
        ta.csv',
         'C:\\Users\\mahad\\Downloads\\capstone_project\\project_1\\202007-divvy-tripda
        ta.csv',
          'C:\\Users\\mahad\\Downloads\\capstone project\\project 1\\202008-divvy-tripda
        ta.csv',
         'C:\\Users\\mahad\\Downloads\\capstone_project\\project_1\\202009-divvy-tripda
        ta.csv',
          'C:\\Users\\mahad\\Downloads\\capstone project\\project 1\\202010-divvy-tripda
          'C:\\Users\\mahad\\Downloads\\capstone project\\project 1\\202011-divvy-tripda
        ta.csv',
          'C:\\Users\\mahad\\Downloads\\capstone project\\project 1\\202012-divvy-tripda
        ta.csv',
          'C:\\Users\\mahad\\Downloads\\capstone project\\project 1\\202101-divvy-tripda
        ta.csv',
         'C:\\Users\\mahad\\Downloads\\capstone_project\\project_1\\202102-divvy-tripda
        ta.csv',
          'C:\\Users\\mahad\\Downloads\\capstone_project\\project_1\\202103-divvy-tripda
        ta.csv'l
```

Concatenating all files into one

Inspecting files for inconsistancy, null value and data typtes.

```
In [5]: yearly.describe()
```

descriptions

- we have 3.4M rows and 14 columns.
- as we see datetime is not readable by pandas
- there are missing values in start_station_name, start_station_id, end_station_name,
 end_station_id, start_lat,start_lng, end_lat, end_lng
- · data types are not defined and not useable.

Type *Markdown* and LaTeX: α^2

Manupulating phase

Data Cleaning: Removing Bad Data and formatting

- dates should be made readable hence we will convert it as panda readable datetime format
- Rides with negative ride_length are considered invalid since the trip start time cannot be greater than the trip end time
- The company's website mentions that rides with ride_length less than 60 seconds are invalid
 as it was potentially false starts or users trying to re-dock a bike to ensure it was secure. Link
 to the website
- Rides with ride_length greater than 24 hrs are outliers and hence, invalid
- Rides with NA's in end_lat or end_lng are considered invalid as the rides were not ended in the proper way
- Rides with NA's in station names but with end_lat or end_lng are considered valid rides

We will create a new version of the dataframe since data is being removed.

```

removing outliers

checking the result. we find some unusual vaules so we inspect them. there are some negetive values and some illogically big vaules which caused by corrupted data we need to fillter them. we took maximum value of 24 hour.

The final usable data

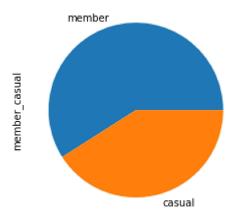

- The data is clean, accurate, consistent and complete.
- Remove Duplicates: Data does not have any duplicate values.
- Check for Outliers: Outliers have been removed. (trip length).
- Check for Missing Values: Removed invalid data with missing values (station_names, end lat).
- Check Data Accuracy: After removing bad data, all the remaining data is within its speculated range and hence accurate..
- Check Data Completeness: All matrices are available to answer the Business Question. prepared some calculations for answering question
 - new trip_length
 - riding hour
 - week_day
- Check Data Consistency: All 12 months of data have consistent format and structure, thus
 making it easier to combine into 1 single dataset
- Check Data Relevance: The dataset contains ridership data of past 12 months, thus the data is current and not outdated.
- Check Data Formats: The columns have been typecast correctly and have appropriate data formats.
- Date-Time Format Consistency: All throughout the dataset the date and time are in consistent format.
- · Column Names: All the column names are clear and meaningful.
- Overall sense of Data: Given the knowledge of the business, the data makes sense.
